AQL Inspection for Water Purifiers: A Buyer's Primer

Buyer action checklist — print & use

Checklist

1. Write AQL into the contract: critical 0, major 2.5, minor 4.0 (adjust to risk).
2. Define the defect classification list for YOUR product (what counts as major vs minor).
3. Choose inspection level (General II is standard; tighter levels cost more inspector time).
4. Book the inspection when 100% of goods are packed and ≥80% palletized.
5. Require photos of the sampling process, not just the final report.
6. Pre-agree rejection terms: rework, re-inspection (who pays?), or discount.
