RO Membrane (1812 / 3012)

QC & buyer checklist — print & use

Checklist

1. Protect the membrane with sediment + carbon pre-filters — chlorine kills TFC.
2. Ask for the salt-rejection report, not just GPD rating — poor rejection is a bad trade.
3. Verify dry vs wet membrane: dry membranes store longer, wet membranes must stay moist.
4. For OEM buyers: confirm whether the membrane brand is fixed or substitutable in the BOM.
